Step 1

Identify the placement of the console. Measure distance from bottom of console to cavity for brackets. Mark locations on wall to ensure the correct location is achieved. Once marked place brackets on wall and screw in with provided screws.

Ensure all brackets are level, spaced out to fit into cavity in back of console, and are placed at the correct height to screw into underside of console.

Step 2

Once brackets are installed into wall, console can be installed.

This step requires at least two people. Carefully lift console and place it down in line with three brackets. Screw brackets in from the bottom to the underside of the console. Ensure console is secure in wall.

Step 3

Installation complete. Enjoy.
