L3 MIRROR
Components

MIRROR

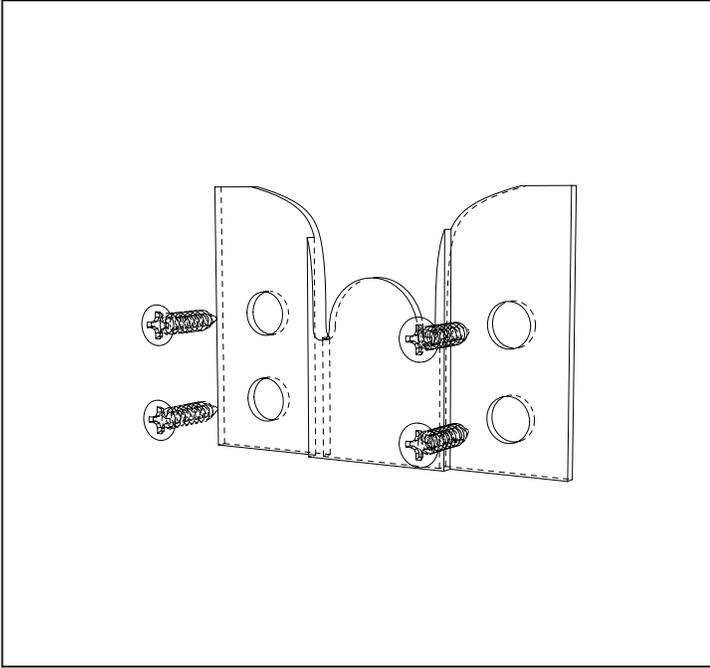

BRACKET

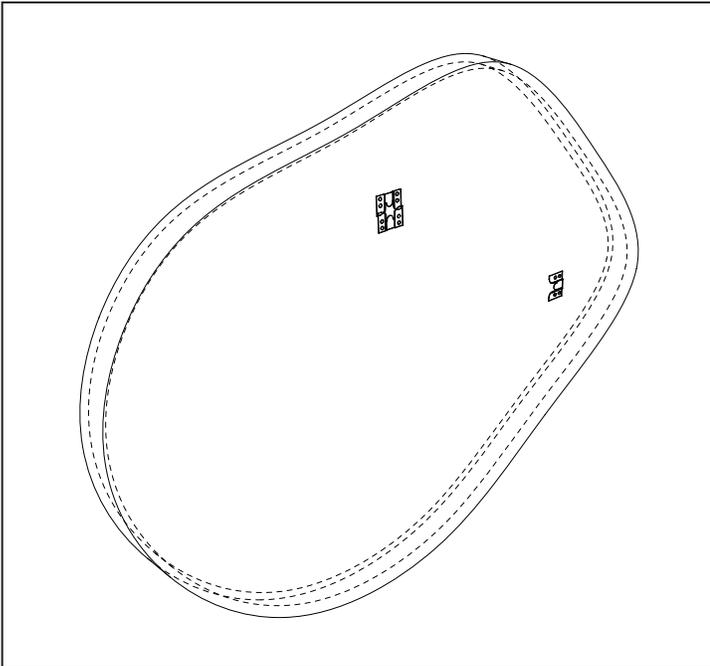

SCREWS

Step 1

Identify the placement of the mirror and decide which orientation the mirror should be mounted in. Take the bracket and find its placement on the wall, about 6 or 9 inches from where the top of the mirror should sit, if the mirror is horizontal or vertical respectively. Ensure the bracket is level and screw the bracket into the wall.

Step 2

This will require two to three people. Once the bracket is secure in the wall, lift the mirror and align the brackets to one another. Slide the mirror into place, making sure the brackets are latching.

Step 3

Installation complete. Enjoy.
